

ABSTRACT OF THE DISCLOSURE

An improved trampoline mat capable of being attached to a trampoline frame using a plurality of coil springs. The trampoline mat includes a flexible bed having an outer portion being folded over and connected to an inner portion of the flexible bed so as to provide a channel about the periphery of the flexible bed. The channel extends around the circumference of the flexible bed and has a filament disposed therein. The filament is configured and arranged to distribute a load to the channel. The filament extends the length of the channel and forms a loop. A plurality of notches are formed in the channel to expose portions of the filament to provide locations at which the flexible bed is coupled to the frame.
